

Bio -

Dennis Gammel is a graduate of the University of Idaho with a B.S. in Applied Mathematics and has been actively working in the computing and communications industries since 1996. His career experience includes network security design, ICS network architecture, embedded product development, ASIC simulation, and firmware design with RTOS application development. Dennis is presently a Research Principle with Schweitzer Engineering Laboratories, Inc. (SEL), responsible for the security technology designed for and implemented in SEL product lines. He has been with SEL since March 2005 and carries with him 20 years of secure firmware and network engineering experience.
